Zürcher Kantonalbank

ZKB Gold ETF AAH CHF

Other | Distributing | January 2020

Security Number: 13910160 Bloomberg: ZGLDHC SW
ISIN-Number: CH0139101601

Fund Description

The fund, which is listed on the SIX Swiss Exchange, invests exclusively in gold and is always 100% backed by the physical precious metal. The valuables are stored exclusively in Switzerland. The investor has the option to sell his shares at any time or to request the non-cash payment in physical gold of standard bars of approximately 12. 5 kg. The share classes hedged in CHF, EUR and GBP include a currency hedge against the USD in the respective reference currency.

Profile/Suitability

This product is suitable for investors who
- have a long-term investment horizon.
- would like to participate in the performance of the gold. An extra yield compared with the performance of the gold can not be expected.

Advantages of Precious Metals

Precious metals offer an effective hedge against inflation and protection in times of crisis. Because of their low correlation with traditional investments such as bonds or equities, they provide an ideal means of diversification. Including positions in precious metals optimizes a portfolio and improves its risk-return profile.

Comments to the Fund

Target Investor Group - Term
All investors

Target Investor Group - Description
A class is offered to all investors. The second letter «A» indicates that the class distributes profits. The third letter «H» indicates that the class provides for currency hedging against foreign currencies (is only shown for hedged classes). A flat rate administrative fee is charged.

Flat Fee (FF)
The FF is used for management, asset management and, where compensated, the sale of the fund as well as for compensation of the custodian bank for services provided by it. The FF is composed of the flat-rate management fee (FMF) and the flat-rate administration fee (costs for management and for administration).

Flat-Rate Management Fee (FMF)
The FMF is used for asset management and, where compensated, the sale of the fund. The FMF is a component of the FF.

Total Expense Ratio (TER)
The TER refers to the commissions regularly charged to the fund assets (operating expenses) and is expressed as a percentage of the fund's assets. The figure quoted relates to the level of the TER in the past financial year and does not guarantee that the level will be similar in the future.

Explanation of general risks
The investment differs from an investment in deposits. Investment involves risks, especially with regard to fluctuations in value, capital and return. Investments in foreign currencies are subject to exchange rate fluctuations. Custody and counterparty risks represent further significant risks. We hereby refer to the detailed description of various risks which are included in the prospectus and/or in the Key Investor Information Document (KIID).

Risk Indicator
The historical data used to calculate the risk and return category cannot be used as a reliable indication of the future risk profile. The reported risk and return category may well be subject to change. The rating by category is consistent with the one shown in the Key Investor Information (KIID). The lowest risk category cannot be compared with a risk-free investment. There is no capital guarantee or capital protection. The risk of capital loss is borne by the investor.

Breakdown Allocations
Allocation refers to invested fund capital adjusted to 100%. Minor deviations can be caused by rounding errors.

Volatility
Volatility is a statistical measure of risk which indicates the extent to which the absolute return on an investment or a portfolio fluctuates on average around its mean value in the course of a year.

Sharpe Ratio
The Sharpe ratio is a performance measure which indicates the risk-adjusted excess return (difference between the portfolio return and the risk-free return) compared to the investment risk incurred (volatility).

ISO Certification
Asset Management at Zürcher Kantonalbank is ISO 9001 certified. The ISO 9001 certification guarantees that the authorised user has a management system that meets the requirements of a suitable and recognised standard and has been successfully certified/assessed by the Swiss Association for Quality and Management Systems (SQS).

Further Specific Explanations
– The value of the gold is calculated based on afternoon closing prices on the London gold market (London, PM Fixing).
